

DONALDSON AEROSPACE & DEFENSE Core Competencies

Custom Design Configurations

A deep understanding of our customer's applications allows us to design filtration solutions that meet customer requirements. Our engineers use their multidisciplinary knowledge and years of experience to create the best product for your specific application. Throughout the design and manufacturing processes, we stay in close communication with you to ensure that your product is produced on time, on budget, and to your requirements.

In-house Media Design and Development

We develop specific filtration media for your application, to your requirements. Unique to the industry, Donaldson's prototype filter media manufacturing facility allows us to develop and test numerous media formulations before going to production. Our dedicated filter media scientists have developed hundreds of proprietary media grades. We don't limit ourselves to off-the-shelf filter solutions, and neither should you.

On-Site Test and Evaluation

Our research and development facilities are the best in the industry. We have extensive in-house laboratory and testing capabilities that allow us to simulate actual application environments, analyze filtration needs and validate filter performance before it is installed on your critical equipment.
